Frontier firms are using AI to unlock truly data-driven cultures

Data professionals

Can use GenAI to create data items, write code, and even build machine learning models

Analysts and data citizens

Can use GenAI to find the right data source, explore the data, and build visualizations

Business users

Can use GenAI to quickly answer their pressing data questions and highlight important insights

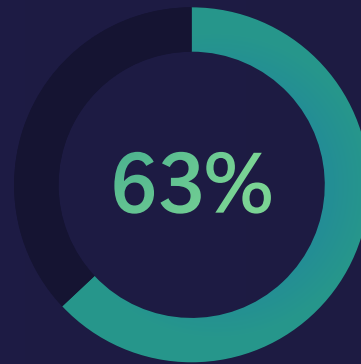

Broad data access and generative AI bring additional risk

Increasing AI-based incidents

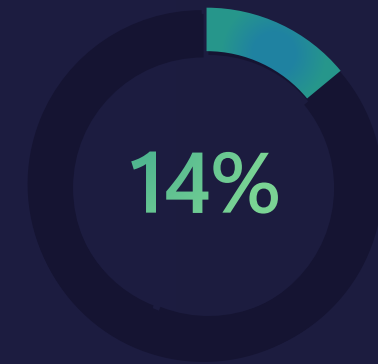

Cybersecurity incidents involving AI surged by more than 56% in 2024¹

AI governance and risk visibility

Of data breaches stem from inadvertent, negligent or malicious insiders³

Security and data culture seem in conflict

of security leaders feel they can effectively secure data while enabling the use of data to achieve business objectives²

1. Stanford's 2025 AI Index Report

2. Gartner: Gartner Survey Reveals Only 14% of Security Leaders Successfully Balance Data Security and Business Objectives

3. Microsoft Security Rethinking Security from the Inside Out 2024 report

Achieving both goals can prove challenging

Fostering a
data-driven culture

Ensuring your
data is secure

OneLake catalog

Bring data access to 350 million Microsoft 365 users

Fostering a
data-driven culture

Unify data in a single, discoverable data catalog

Empower everyone to use data directly in apps like Teams and Excel

Prevent data leakage using the same, industry-leading security found in Microsoft 365

OneLake catalog

Secure your data with Microsoft's industry-leading protection

Ensuring
your data is secure

Isolate your sensitive data with
always-on network security

Manage data access at the item, folder,
row, and column level

Comply with all data residency and
standards

OneLake Catalog

The trusted data catalog for organizations worldwide

100+

Widely used apps—from Teams to Excel—have the OneLake catalog embedded for business users

240k+

Organizations store, manage, and govern enterprise data in the OneLake catalog

350M+

Data items are managed in the OneLake catalog, enabling easy end-to-end governance

The trusted data catalog for 240,000+ organizations worldwide

 OneLake catalog

Explore: Unified data discovery and curation

Govern: Unified data governance and administration

Secure: Unified data security and protection

OneLake

Copilot

Open at every level

One catalog to centrally discover, govern, protect

Any data, anywhere in the **Explore** tab: Easily discover, explore, and manage all your data in a single, filterable catalog

Built-in governance at scale in the **Govern** tab: Understand your data governance with insights and recommended actions

Zero-trust protection in the **Secure** tab: Manage OneLake security roles and permissions in a central hub

OneLake catalog Explore: discover your entire data estate

Use **personalized views** and **filters**, like domains and tags, to find the right data

Get a full in – context view of each item including **lineage** and **permissions**

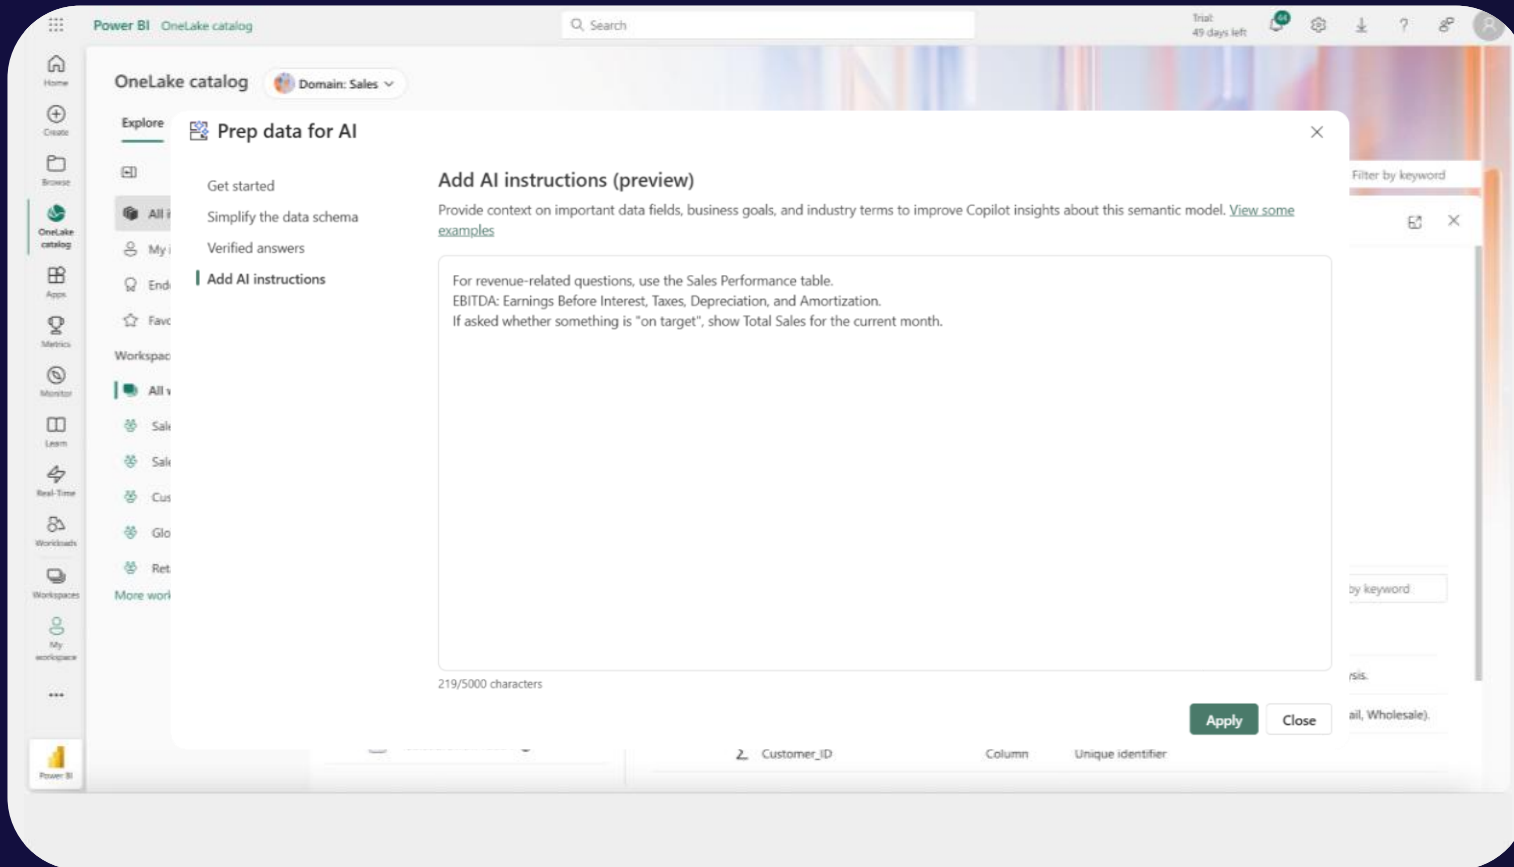

Search for data using **Copilot in Power BI** to gain insights faster

New

Use **catalog APIs** to access metadata through Fabric MCP, CLI or custom solutions

Curate your data for discoverability and AI readiness

New

Apply custom tags to items and **workspaces** to improve AI readiness and discoverability

Endorse content as certified, promoted, or master data to highlight it as a trusted source

Prep data for AI with AI data schema, verified answers and AI instructions

New

Use Copilot to generate summaries and **descriptions** for semantic models

Bring data access to all of your business users

Bring data to business users with experiences in 100+ apps, including **Teams, Excel, and Foundry**

Discover data right into the tools you already use, so you can stay in flow **without switching context**

Share data securely with **OneLake security and Purview label protections** applied even in M365

Enhanced support for tables & columns

Roadmap

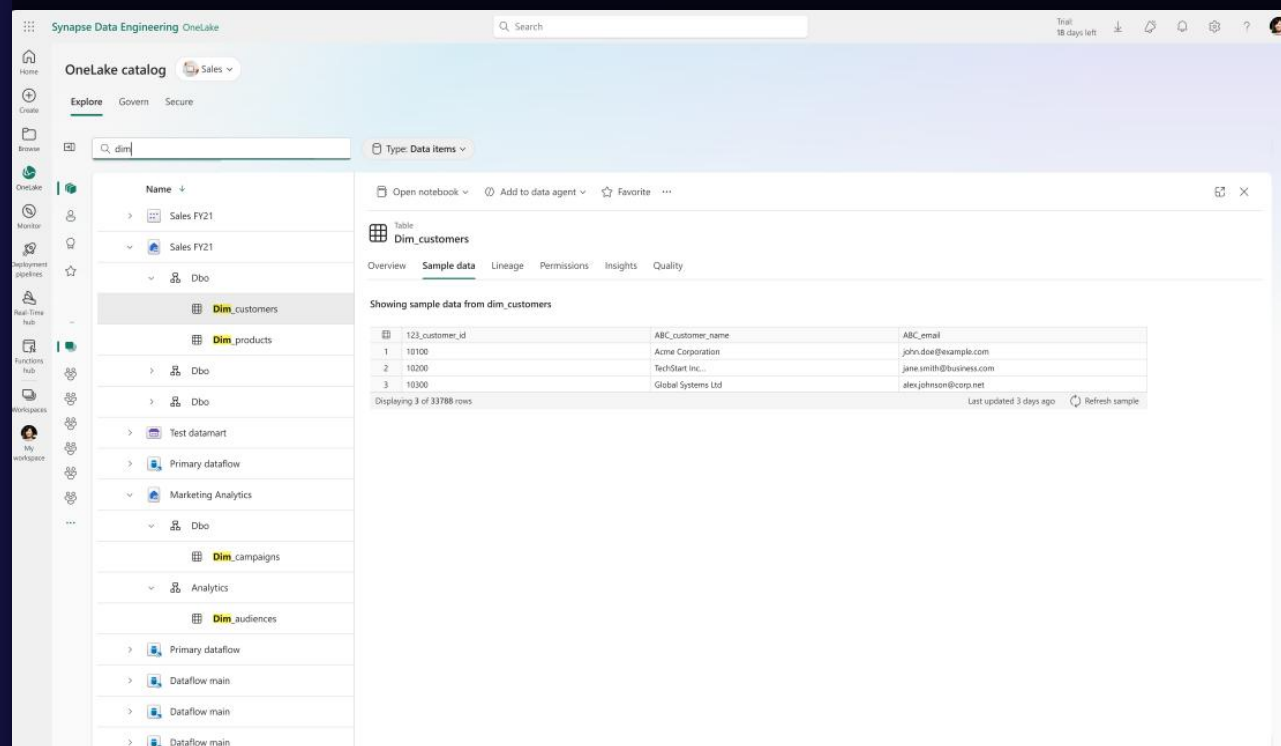

Streamlined browsing reveals underlying data schema in-place for any data item stored in OneLake

Deeper search allows you to retrieve items & tables using names and descriptions down to the column level

Enhanced curation allows you to enrich tables and columns with business descriptions

The trusted data catalog for **240,000+** organizations worldwide

Why governance, why monitoring?

As organizations continue to expand their use of Fabric, it is critical to have a governance strategy in place to ensure secure and effective use of your data.

Cost optimization – Analyze usage, identify idle resources, and organize workloads by functional area

Audit and compliance – Maintain activity logs for data access and content changes to meet regulatory requirements

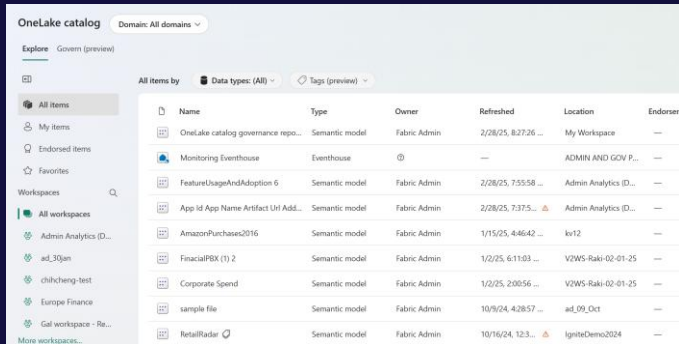

Safe and secure use of data – Prevent unauthorized access and accidental data exposure through labels and policies

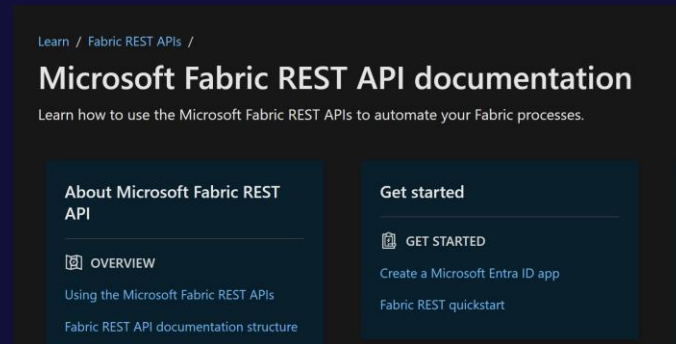

Efficiency and reusability - Track usage patterns and adoption metrics to guide platform investment decisions

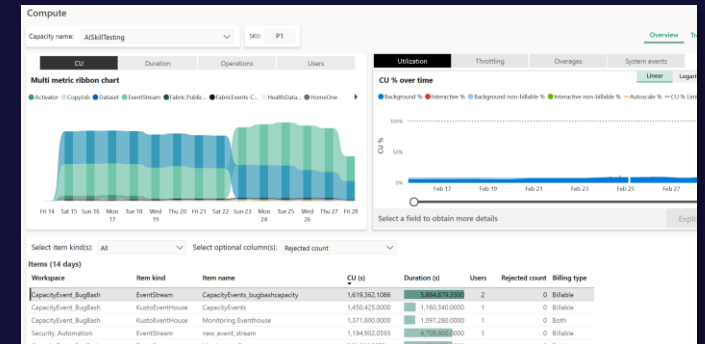

Which Microsoft monitoring solution is right for me?

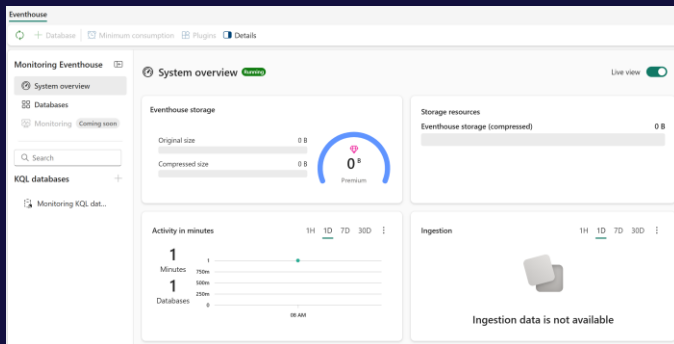

OneLake catalog – Actionable
lens into your data estate |
Admin\Developer

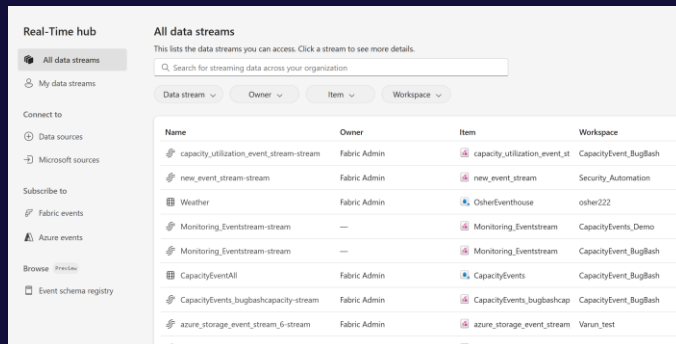

APIs – Flexible, programmatic data extraction & automation | **Admin\Developer**

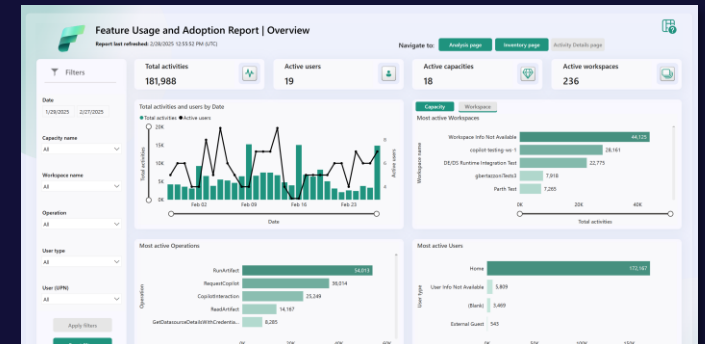

Capacity Metrics App – Capacity management and resource planning | Tenant\Capacity Admin

Workspace Monitoring – Diagnostic logging for Fabric items | Developer

Real Time Hub – Event streaming for Fabric workloads | **Developer**

Admin monitoring – Out of the box reports on key governance scenarios | **Admin**

Govern report + other monitoring related reports **available in Admin monitoring workspace***

Transformed, curated semantic models for customization – including custom reports, alerts, added dimensions, and extended retention

Available to tenant admins by default, with ability to share content with others as applicable

Available to all tenants regardless of licensing type or size of organization

*Data owner report available in My workspace

Enhancements coming soon to OneLake Catalog

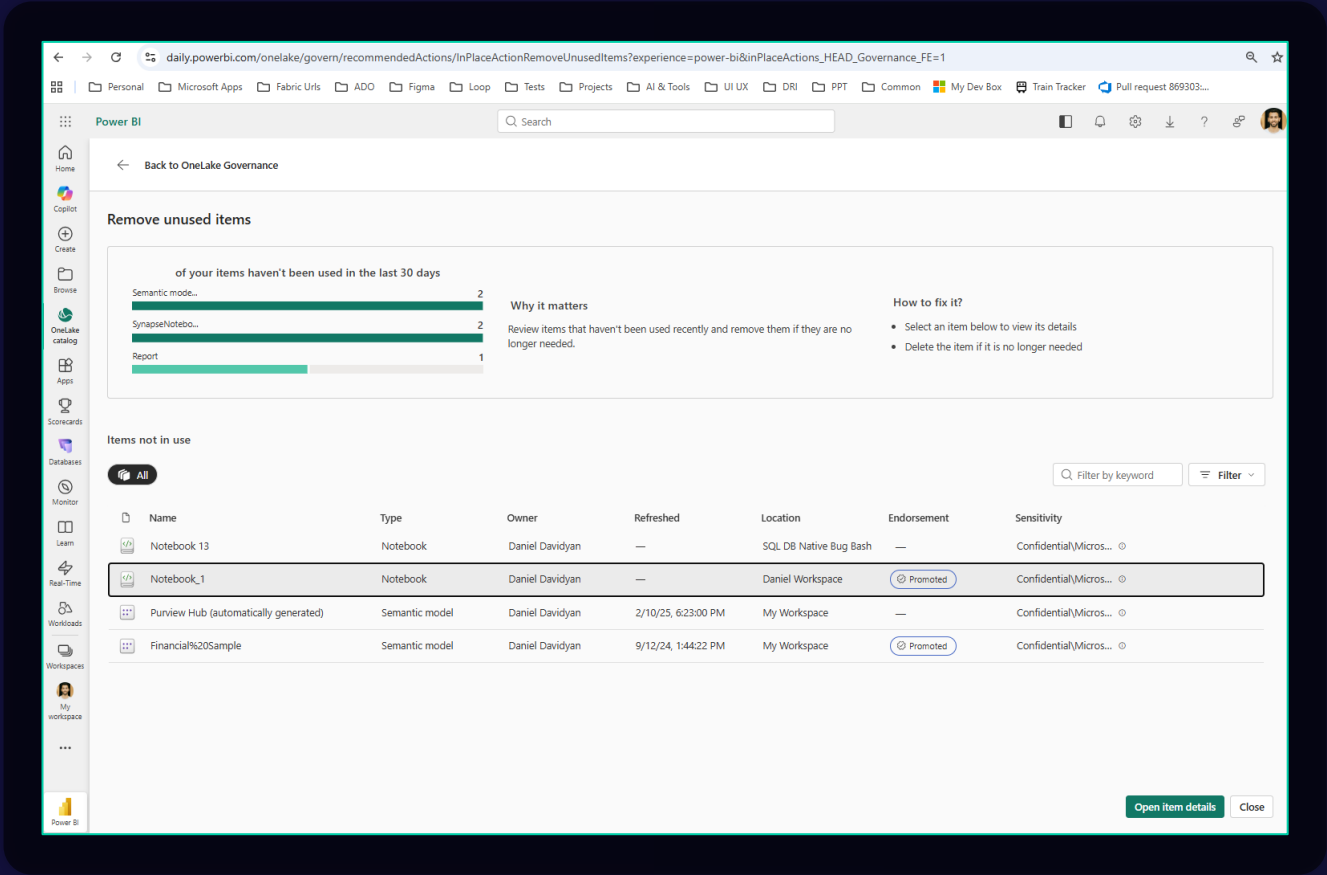

In-place actions – v2 of Catalog’s recommended actions, with ability to act on items directly from the Catalog while maintaining context*

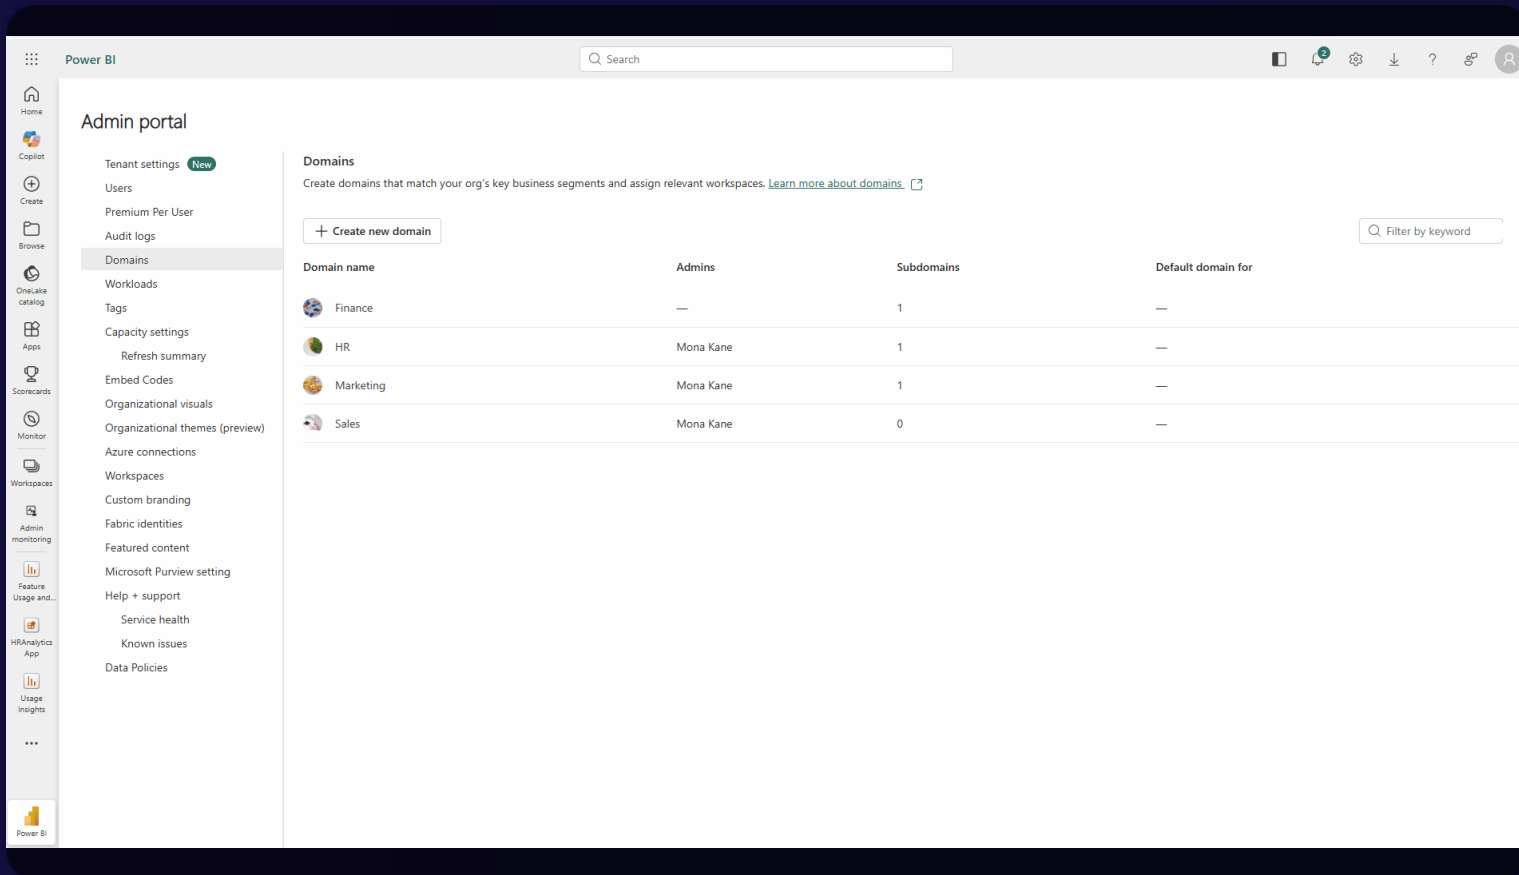

Govern report – New page highlighting **Tags**; by creating user, coverage by item type, most/least used tags, and more

Govern report – New page indicating listing all **workspaces by “status”**, emulating view from Admin portal

Manage your data estate in a flexible, federated data mesh

Define **domains, sub-domains and workspaces** to organize and manage a logical data mesh

Implement **tenant-wide policies** through a central portal or **delegate control** to capacities, domains, and workspaces

Curate domains with tags and default sensitivity labels and audit domain activity

Govern with a centralized framework with policies in Fabric

 Coming soon

Create policies to enforce **compliance, security and regulation requirements** across your tenant

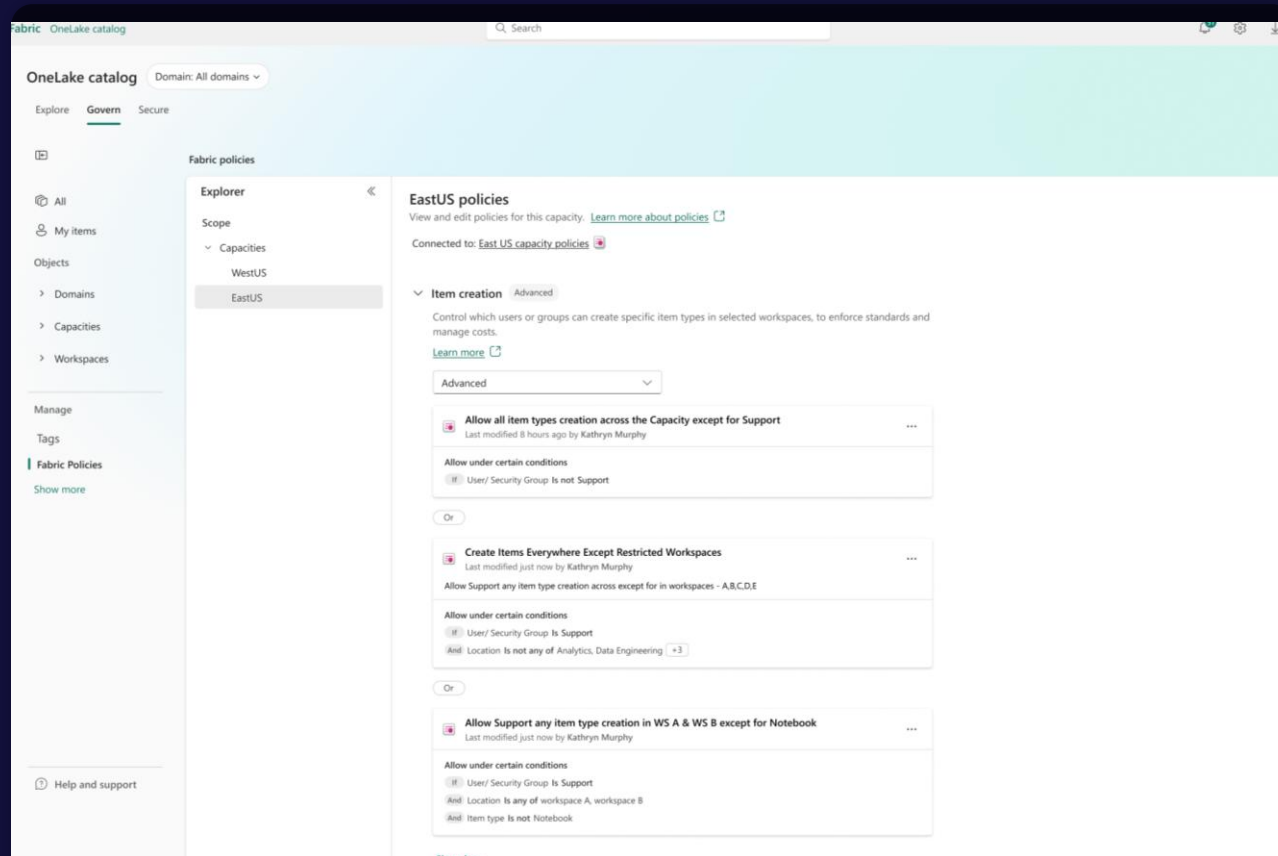

Define **granular, attribute-based policies** to govern user and system actions

Manage policies in a single place with the new **policies center** in the OneLake Catalog

Support policies at scale via **APIs and Git**

Data governance with E2E lineage and flow visualization*

Generally available

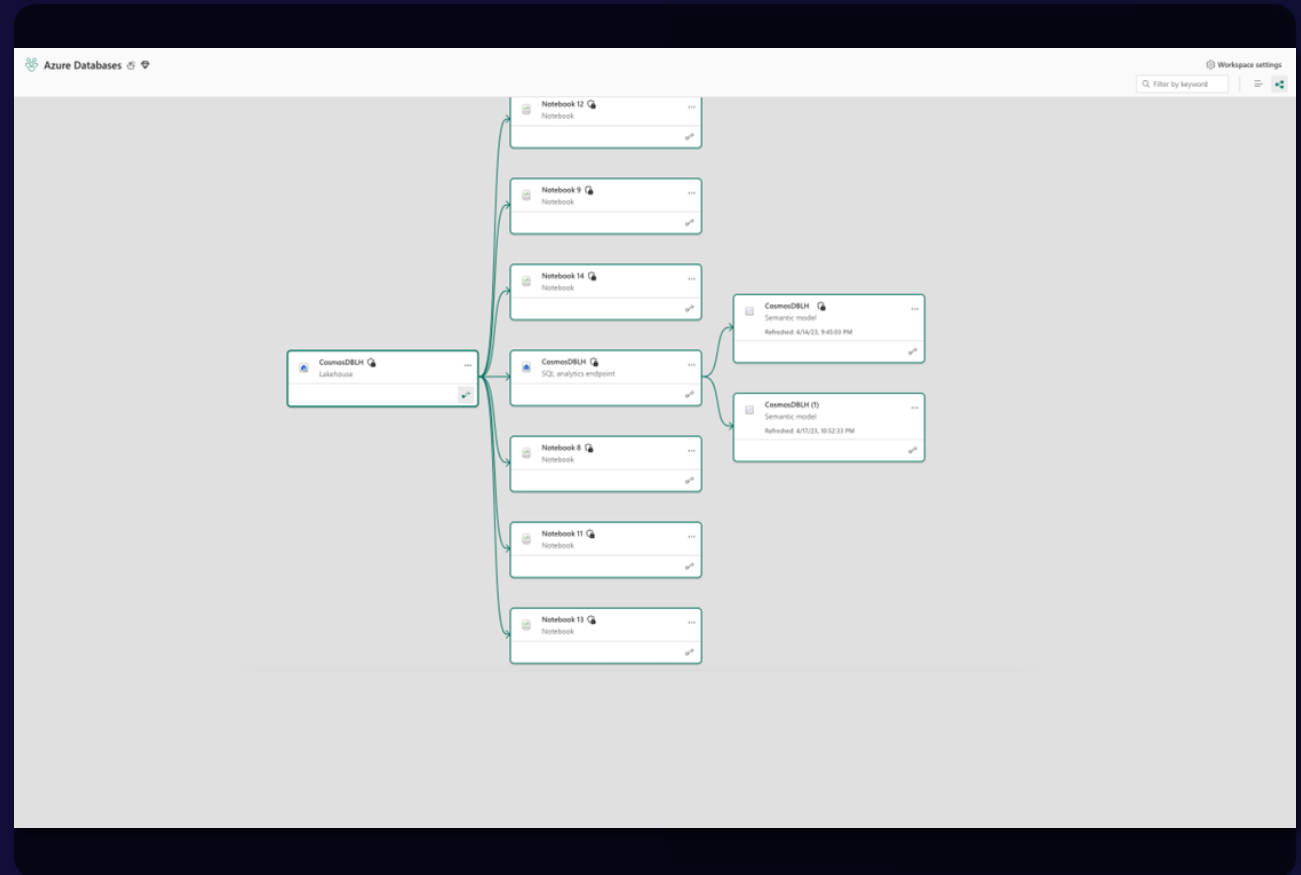

Quickly **troubleshoot issues** and **gain trust** through transparent **E2E lineage**, available both in Fabric's UI and through APIs

Perform **Impact analysis** to see what's affected and act with confidence

Coming soon: Provide API access to Open Lineage formatted events with **granular runtime lineage for Spark** and other workloads
